20 Most Promising Enterprise Asset Management Solution Providers 2015

In a vehemently competitive business environment, efficient management of physical assets can ensure the growth rate of the business. These assets should be maintained accurately—from the point of initial acquisition to the point of disposal. Enterprise Asset Management (EAM) software plays a vital role in optimizing the performance of physical, contractual, financial, and relational aspects of an entire asset lifecycle.

EAM software is largely being utilized by industries across verticals to maximize the productivity of assets, while minimizing maintenance, labor and production costs. EAM software mitigates the risk of equipment breakdown and downtime by tracking and recording the performance of assets, which in turn improve the asset maintenance practices within an enterprise. It maintains detailed service records of the assets in order to help the organizations make smarter purchasing decisions in the future. EAM software

also extends the life of existing assets, while helping the enterprises to remain in compliance with applicable regulations.

In this scenario, many technology solution providers have redefined EAM space by developing solutions that can effectively manage the entire asset lifecycle with a few clicks.

To simplify and assist CIOs navigate the Enterprise Asset Management solutions landscape, CIO Review presents you a special edition on most promising Enterprise Asset Management solution providers 2015.

A distinguished panel consisting of CEOs, CIOs, VCs and analysts including CIO Review editorial board has decided the “20 Most Promising Enterprise Asset Management Solution Providers 2015” in the U.S., listing the vendors and consultants who provide key technology solutions and services related to EAM.
